INTEGRATED-WALLING

Overview

Suitable for a diverse range of applications, from new build to restoration work, render provides a durable, weatherproof and attractive finish. Available in a myriad of colours and textures, there is something for every style of building. There is even the option to incorporate a layer of insulation into the system to provide the high thermal efficiency demanded by Class O building regulations.

I-W are approved installers of the Structerm range of UK and continental renders, which combine a choice of base coats made from natural limestone with a variety of modern and traditional finishes. Structerm share the I-W philosophy of using the latest technology to ensure the highest quality and consistency, backed by a 10 year guarantee.

Projects

- ▣ Lime Street, London
- ▣ St Andrew's University
- ▣ Sheffield University

Featured Project - Sheffield University Student Village

A large multi phase project creating new student accommodation for the University of Sheffield. This project provided a great opportunity for us to show case the benefits of having several packages managed by a single contractor.

In addition to render, I-W were involved in the architectural and commodity blockwork, brickwork, timber cladding, as well as precast flooring, roofing and screeding packages.

The mixture of new fast track building techniques and traditional methods proved very effective. For example an insulated render system was used which incorporates a blockwork wall overlaid with CFC free insulating board, followed by a scrim adhesive cloth mesh, grey polymer basecoat and a cream polymer render finish.
